

To all future students of Algebra 1314,

One thing you can expect is for Algebra 1314 not to be easy. Some people are blessed, and can understand math easily, but for people like me, it is going to take a lot of work. So to address the students that have some trouble with math in general, STUDY!! At times, you think that you have studied enough, maybe even more than you ever have, just know you should probably study some more. Luckily, lectures are posted on Blackboard, which I highly suggest using it to your advantage. Don't forget to do the WebAssign homework, and try to work every problem. Lab assignments break down the problems so again, it is another grade laid out for the taking. The week before an exam study a few problems every day, the more times you work out a problem the easier it becomes. If I could start this semester over knowing what I know now, I would do some things a little differently. Like making sure to have time set aside, in order to give studying your full attention. Distractions, such as phones, television, music, or even family or friends can all be a distraction. Don't let distractions decide your fate in this course. So good luck, study, and do all assignments and you should do just fine.
