

Dear Future Students of MATH 1314,

Professor Yosko covers a massive amount of material in a short amount of time. This means she will move through the sections very fast. It's your duty to speak up and ask questions when you are lost. If you do not, she will assume everyone understands and will move on.

She has office hours where you can come in to see her and she will help you with homework or whatever questions concerning the class that you may have. Take advantage of her office hours and the tutoring center.

Also, give yourself plenty of time to study before test. When I say this, I mean start studying a week in advance. Make sure you learn the material and don't forget about her Friday quizzes.

Skipping class, don't do it. Skipping class is pointless. You think you're cool but you're not so cool when you show up the next day and have absolutely no idea what's going on. You pay for your education; you might as well get it.

As long as you show up to class, keep up with assignment due dates, and study and review over the material you will be fine. There will be times when you might feel overloaded or a little stressed out but let me tell you from experience, dropping the class is not the way to go! I know it may seem like a lot of work but stick with it and push yourself through!

LM
